

October 23, 2026

Sompo Japan DC Securities Inc.

**Notice Regarding a Possible Leak of Customer Information Due to Unauthorized Access
to a Third-Party Email Delivery Service (Second Notice)**

Following our notice of October 23, 2026, Sompo Japan DC Securities Inc. (hereinafter referred to as “the Company”) is providing an update on the current status of the investigation into the unauthorized access to RAKUS Light Cloud Co., Ltd. (hereinafter referred to as “the Service Provider”), the provider of “Blastmail,” an email delivery system used by the Company.

1. Current Status of the Investigation

The Service Provider has disclosed the status of its review of clients that may have been affected by the unauthorized access.

According to the disclosure, the Service Provider has completed individual notifications to 288 clients for whom a leak of delivery-related information (such as recipient lists) was confirmed within its system.

As the Company did not receive such a notification, the Company contacted the Service Provider directly and confirmed that it is not among the clients that received individual notifications.

Therefore, at this time, no leak of delivery information relating to our customers has been confirmed.

2. Next Steps

A specialist team at the Service Provider is still conducting a detailed investigation of its entire system. The Company will continue to work closely with the Service Provider and monitor the progress of the investigation. Should any new facts requiring disclosure come to light, we will promptly announce them on our website and through other channels.

3. Impact on the Company’s Core Systems and Customer Information (Restated)

This incident involved unauthorized access to the Service Provider’s servers. The Company’s core systems were not accessed, and our DC pension online service, the “AnswerNet,” has not been affected.

In addition, sensitive information such as customers’ addresses, phone numbers, dates of birth, Basic Pension Numbers, login IDs and passwords, financial institution account details, and asset balances was never stored in the email delivery system involved in this incident and is therefore not at risk.
